Currently I am a student of information technology at the University of Education Da Nang. I have a great passion for programming and economics. The first project I do is called "Ball Run Forest". It's a computer game, through this project I have a good understanding of how to build a game, besides "Ball Run Forest" I have also written a few other games. I love doing projects, because through it I learn a lot about programming. Some typical projects on web programming such as hotel management website, shoe introduction and sale web. I have strengths in areas such as database administration, design, web programming, online marketing, and understand the software development process. Also, I can use Microsoft office proficiently, and the image and video processing is quite good.

- EDUCATION -
